Description of the project

EduTerra.PRO — platform for creating e-learning systems.

This innovative digital tutorial platform will provide an opportunity for everyone to access educational content, regardless of their location.

Currently, the platform is localized in English, Swahili and Bahasa Indonesia. It can also be easily translated into any language.

Areas of application

The platform allows to implement a wide variety of training scripts within a single system: from short thematic courses to long-term educational programs.

This is the reason for the wide applicability of EduTerra.PRO, which is equally well suited for both corporate and academic training, team of authors and individual creators.

The platform will help you to organize and maintain the educational process for big amounts of attendants controlled by a small group of teaching staff, methodological employees of e-learning centers and tutors.

Technical specifications

EduTerra.PRO is developed as a cloud service that provides services over the Internet.

The user requirements are minimal: a connection to the system and the latest version of the web browser.The platform has an adaptive design and works on modern smartphones, tablets and laptops — without additional settings and costs.

All modern operating systems are supported. If Internet connection is not available, the platform can work as a schoolbook.

EduTerra.PRO has its own tool (Markeven) for converting plain text into well-looking web. It means that the teacher with basic computer skills is able to create a qualitative e-course in a short time.

It allows students to convert training courses into ePUB, HTML, PDF formats for offline learning in any location. To record the learning outcome, the system provides an «electronic document» mechanism: issuance and automatic electronic confirmation of educational documents (including automatic QR-coding).

So, the platform is one of the mostly productive systems worldwide.

Current status of the project

The project has been successfully completed. EduTerra.PRO is working in public and private educational institutions, training centers, and corporate companies. But it can be easily supplemented with new functionality due to on the requirements of the educational market & specific Customer.
